

We just wanted to start by saying...

We Understand.

We have been there. You are losing your hair and every day that goes by, it keeps getting worse. You are getting sick of hiding under hats and your balding is adding unnecessary stress to your life. You have researched the pills, creams, and transplants, and none are right for you. You know there has to be something else...

The Scalp Aesthetics Technique (SAT) is

Our Solution.

The best part of the SAT procedure is that you can really have whatever desired outcome you desire. Anything you want can be achieved, and during your consultation we will go over how dense you want your hair, the darkness and overall look you are striving for. Our specialists will be very honest and upfront with you if your desires fit into what is achievable or not. Honesty and integrity is the Scalp Aesthetics way.

The Scalp Aesthetics Advantage

Scalp Pigmentation is a procedure that is gaining exposure on a national and international level. Our Scalp Aesthetics Technique was created to give the illusion of hair follicle replication without having to go under the knife for an expensive invasive surgery. The SAT is often referred to as a hair tattoo, although far more advanced in the technique. It is a permanent, non-invasive, affordable alternative to the knife!

Our Treatment Gun.

Our competitors use permanent makeup machines with a 3mm stroke length. We found that better results are achieved with a longer stroke length, so we developed the world's only scalp micropigmentation machine delivering 5mm. Although we're still hitting just the top layers of skin, a longer stroke means more ink is deposited, resulting in less fading, fewer sessions required, and ultimately better results.

Our Needles.

Like their machines, our competitors use permanent makeup needles to perform scalp micropigmentation. These needles are too large, and creates dots that are too wide to correctly simulate real hair follicles. At Scalp Aesthetics we developed our own needles that only fit our own machines. They are 75% smaller than commercially available needles, resulting in smaller follicle replications and more realistic results.

Our Ink.

Tattoo inks and permanent makeup pigments are regularly used by many of our competitors. Tattoo ink and permanent makeup pigment is made up of blue, green and purple constituent colors. When they're broken down by your immune system or by ultraviolet rays from the sun, the black ink separates and changes color, just like the ink used in a regular body tattoo does. On the scalp, this change can take less than a couple of months.

Our pigments are 100% organic with no color additives. They cannot break down into other colors because they contain NO CONSTITUENT COLORS. This is critical.

You might have heard of other providers inks turning blue, but it never happens at Scalp Aesthetics. That's why we're recommended by the world's leading hair transplant surgeons.

Our Results.

Oz Tozan

Listen to questions and answers from Oz Tozan on how Scalp Micropigmentation was good preventative maintenance and how he had the best experience with Scalp Aesthetics. This isn't just a hair tattoo, this a new way of life..Stop hair loss before it starts.

Our Results.

Jim Mannon

Jim had undergone hair transplant surgery and it did not take. Jim States “Getting a transplant was the worst mistake I have ever made.” After getting the transplant he came to use for help to covering his scars and to get the look of a full head of hair back. He is in love with the results and wishes he had come to us first.
